General Electric Signs Five-Year Agreement for Technical Information Work with GGS Information Services

New Five-Year Contract Span Among Longest Ever in Technical Publications Industry

YORK, PA – YORK, PA – The General Electric Company Aviation Division (GE) has recently extended its contract for an additional five years with GGS Information Services. The contract directs the GGS Technical Publications division to produce Illustrated Parts Catalogs for GE's large and small commercial jet engines, and provide administrative support to GE personnel in the production of Engine Shop Manuals and related documents.

The first contract between GGS and GE began in September 2001, and initially involved the production of Illustrated Parts Catalogs for large commercial jet engines. Since 2001, the scope of work has expanded to include work with several GE divisions, including its large engine facility in Cincinnati, OH; its small engine facility in Lynn, MA; its rail equipment division in Erie, PA; and its Unison subsidiary in Jacksonville, FL. This additional work has led to the on-site placement of almost 30 GGS personnel within GE's own facilities.

(Continued)

“We are delighted and a bit humbled that a premier business organization such as GE continues its business relationship with GGS,” noted Paul Kilker, President. “As an acknowledged leader around the world focused on quality, GE insists on utilizing only the very best, ISO quality certified partners, and we know of no other technical services provider who has ever received a contract of this duration,” he added.

More information about GGS Information Services and its technical publication services for original equipment manufacturers and development, design and production services for leading book publishers can be found on the internet at www.ggsinc.com or by calling GGS at (800) 927-4474.
