

GGG Technical Publications Services

GGG Technical Publication Services offers a broad array of innovative technical information support services to original equipment manufacturers, from our four office locations in the United States and India.

From technical writing and illustrating, to parts database management services, professional staffing, and content management solutions, GGS can provide a unique solution that will add real value to your firm's business.

While some competitors work with customers from any industry, we at GGS focus our skills and expertise on four key marketplaces — where time, cost, and quality are the key differences between success and failure.

Aviation and Aerospace

GGG provides a wide scope of aero-related services, which include the development and updating of common source databases, the creation of user-unique provisioning data services, and the development of AMMs, CMMs, IPCs, and much more.

We've worked with customers such as GE Aircraft Engines, BAE Systems, Sikorsky Helicopter, and FedEx on a daily basis, helping deliver their data at the leading edge of a highly-competitive and time-sensitive industry.

Automotive and Heavy Equipment

From over-the-road trucking equipment to construction and agricultural equipment, GGS helps get the job done for the most well-known brands in the world.

Mack Trucks, CNH America LLC, International Truck and Engine, American LaFrance, Workhorse Custom Chassis, Grove WorldWide, and JLG Industries, Inc. have all counted on us throughout the years to deliver an unmatched level of performance to their company's parts, service and aftermarket operations.

Whether it's establishing a global Internet-based parts ordering network, converting archived engineering data to a digital format, or developing complex service and maintenance information, each of these popular brands has taken advantage of our technical skills to optimize

the delivery of their product to market. This includes staffing solutions where we can recruit and place technically savvy professionals on-site, whether for a single short-term project or multiple projects of longer duration.

Commercial and Industrial Customers

Key customers such as Johnson Controls, Inc., Trans-Air Manufacturing and others put their trust in us to develop and provide parts and service information in both print and electronic form, as well as parts ordering networks and large-scale databases for their service personnel and customers throughout the world.

Military and Government

GGG provides a wide range of MIL-STD-1388 compliant Integrated Logistics Support services. Our area of expertise includes IPBs; Organizational, Intermediate, and Depot-Level manuals, as well as various classes of IETMs.

Our ILS team constantly meets and exceeds standards set forth by commercial industry and the U.S. Department of Defense. Capabilities include SGML, XML, hard-copy, CD and web deployment of data.

A Total Quality Effort in All That We Do

GGG is certified by the British Standards Institution (BSI), and meets all of the International Standards Organization's ISO 9001:2000 guidelines for quality.
